

CITRIX SECURITY ASSESSMENT

OVERVIEW

Did you know that your existing Citrix environment is inherently securing your business apps and data? Your platform includes technologies that can be optimized to provide enhanced security - whether your environment is on-prem, hybrid, or completely cloud-based.

In recent years, security requirements have increased as cyber threats keep growing and evolving. IT forces, including cloud transition, the proliferation of mobile devices and apps, shadow IT, and the increase of users with greater access to the corporate network are all raising the security stakes.

It is more important than ever before to secure the delivery of apps and data amidst this rapid evolution. As a leading **Citrix Platinum Plus Solution Provider** named the **Global and Worldwide Partner of the Year**, IntraSystems wants to help our customers increase the security of their Citrix environment, therefore reducing risk and ensuring business continuity. IntraSystems' security-focused offerings can help our customers better protect their Citrix environments.

As a long-standing provider in offering security solutions combined with our Citrix knowledge and expertise, IntraSystems is uniquely positioned to equip our customers with the right tools to protect their Citrix environment. Our Consulting teams draw upon this extensive experience, providing the skills required to help our customers harden their Citrix environment – reducing the attack surface and carefully balancing risk management with end-user productivity.

PROCESS

IntraSystems' Citrix Security Assessment evaluates key aspects of the Citrix environment to reduce your overall security exposure. Our security experts will evaluate users, apps, data, and more to identify vulnerabilities, analyze risk and make recommendations to protect your digital workspace and ensure business continuity.

IntraSystems simplifies the security model by transitioning from point solution and device specific security to a centralized secure delivery framework. IntraSystems' Citrix Security Assessment is an onsite engagement that evaluates all layers of your Citrix environment in order to provide recommendations for optimizing the following:

- **Contextual Access** | Focus areas will include user personas, role-based access, segmentation, and endpoint control.
- **Network Security** | Physical, appliance, networking, and operational layers are examined, including traffic encryption, packet inspection, addressing and routing, and DoS protection.
- **Application Security** | Focus areas include application delivery, centralization, policy lockdowns, containment and isolation, web app protection, and secure browser configuration.
- **Data Security** | Factors examined include data sharing and mechanisms used to protect data in transit and at rest, including data hosting, file link expiration, and data wipe procedures.
- **Insights & Analytics** | Operational security factors assessed include monitoring, event logging/auditing, anomaly detection, and delegated administration.

ENGAGE THE EXPERTS

IntraSystems' Citrix Security Assessment serves as the initial stage of a comprehensive security strategy by enhancing network control, comprehensive monitoring, and attack prevention.

Building upon this evaluation, IntraSystems offers other engagements and solutions that can help you improve the security of apps, data, browsers, and file sharing.

KEY BENEFITS

- **Proactive Approach** | Instead of waiting for threats to emerge, this engagement empowers you to take the initiative in understanding and addressing critical focus areas. IntraSystems will pinpoint potential exposures and offer suggestions for strengthening your security posture to prevent or minimize attacks.
- **Comprehensive Scope** | This assessment spans all aspects of your Citrix environment to provide a holistic view of risks, vulnerabilities, and remediation recommendations.
- **Partner Expertise** | IntraSystems combines deep knowledge and analytical skills with a fresh, objective viewpoint to uncover issues that you may be unaware of – or have overlooked!

ABOUT US

Founded in 1996, IntraSystems is a highly respected IT consulting/advisory firm, managed services provider, and systems integrator with SOC 2 and ISO 27001 certifications. Specializing in IT infrastructure deployment, cybersecurity services and assessments, virtualization, security, and cloud solutions, IntraSystems excels at addressing today's complex technology challenges. From navigating the rapidly evolving security landscape to cloud migration and meeting compliance standards like GDPR and HIPAA, IntraSystems delivers proven expertise and tailored solutions every time.

IntraSystems ensures customer satisfaction through technical expertise, strong partnerships, and the professional integrity of every team member. With specialized knowledge and experience that is hard to replicate, we build trusted relationships and deliver the industry's highest level of personalized service. By combining in-house expertise with top-tier business partnerships, IntraSystems empowers your organization to focus on its core business priorities.

We assess your business priorities and environment to identify the ideal combination of technical expertise and technology tailored to your unique needs. Recommending, customizing, and implementing IT solutions are at the core of our strengths. Over the years, our commitment to service and our reputation for technological and business integrity have earned us an extensive list of satisfied clients. We take our responsibility very seriously. It's an approach that works well in everyday situations — and it's precisely what drives our success.
