

EMAIL THREAT PROTECTION

OVERVIEW

Your Microsoft 365 email is vulnerable to thousands of cybersecurity attacks—and the most serious threats may already be in your inboxes.

Email remains a top threat vector, with spam, viruses, phishing, malware, ransomware, and other advanced threats intended to steal data and hijack control of your business. As attacks continue to become more complex and dangerous, many email threats today use social engineering tactics to target users and bypass email security gateways. In addition to stopping external threats in inbound email, you also need to guard against outbound email being used to send confidential business data or unknowingly distributing malware and viruses.

Built-in Microsoft 365 features can help, but there are thousands of threats that can easily bypass standard email filters. Plus, cybercriminals test and design their attacks to evade the native security features of Microsoft 365. With phishing and account takeover among the fastest-growing email security threats, your Microsoft 365 accounts are at risk because native defenses don't provide the necessary level of protection.

Identify and eliminate the advanced persistent threats in your corporate email system. IntraSystems partners with key technology partners to provide our customers with advanced threat protection for Microsoft 365 email. As a long-standing provider of security solutions, combined with our knowledge and expertise, IntraSystems is uniquely positioned to equip our customers with the right tools to protect their email environments.

PROCESS

IntraSystems uses various tools to discover security and compliance threats that have bypassed your email gateway and are already in your Microsoft 365 email inboxes.

Working with IntraSystems, we can help you:

- **Find the threats already in your Microsoft 365 mailboxes |** Close the dangerous gaps in your Microsoft 365 email: An artificial intelligence platform detects the social-engineering attacks that have bypassed traditional security. Get a comprehensive look at each email threat, broken down by time, employee, and threat type.
- **Identify which threat types you're most exposed to |** Conversation hijacking. Extortion. Impersonation attacks. Phishing. Scamming. Each threat type is identified and included in a summary that shows which threats were the most prevalent in your mailboxes in the past 12 months.
- **Determine which employees are most at-risk |** Email threats aren't distributed equally across your business. Identify employees most likely to be targeted with spear-phishing and other attacks. See who in your organization is most at-risk by looking at their titles, conversation risk factors, and the total number of attacks directed at them.
- **Check your DMARC protection status |** See the Domain-based Message Authentication Reporting and Conformance (DMARC) status of your domains and ensure your brand is protected from domain spoofing and impersonation attacks.

Find the advanced threats already lurking in your corporate email system. Let IntraSystems provide you with a FREE Email Threat Scan that identifies the dormant threats in existing Microsoft 365 emails and evaluates your potential exposure to new threats.

KEY BENEFITS:

If you're an IT professional who needs an easy-to-manage and comprehensive email security and compliance solution, you can rely on IntraSystems to deploy and manage email protection for your organization.

Some of the key benefits and features include:

- Spam and Malware Protection
- Email Encryption
- Data Loss Prevention
- Zero-day Attachment Protection
- Zero-day Link Protection
- Phishing and Impersonation Protection
- Automatic Remediation
- Unlimited Cloud Archiving
- Security Awareness Training
- Threat Hunting and Response
- SIEM/SOAR/XDR Integrations
- Attack Simulation
- Account Takeover Protection
- Email Continuity
- Automated Workflows
- Domain Fraud Protection
- Web Security
- Cloud-to-Cloud Backup
- Data Classification
- Zero Trust Access for Microsoft 365

ABOUT US

Founded in 1996, IntraSystems is a highly respected IT consulting/advisory firm, managed services provider, and systems integrator with SOC 2 and ISO 27001 certifications. Specializing in IT infrastructure deployment, cybersecurity services and assessments, virtualization, security, and cloud solutions, IntraSystems excels at addressing today's complex technology challenges. From navigating the rapidly evolving security landscape to cloud migration and meeting compliance standards like GDPR and HIPAA, IntraSystems delivers proven expertise and tailored solutions every time.

IntraSystems ensures customer satisfaction through technical expertise, strong partnerships, and the professional integrity of every team member. With specialized knowledge and experience that is hard to replicate, we build trusted relationships and deliver the industry's highest level of personalized service. By combining in-house expertise with top-tier business partnerships, IntraSystems empowers your organization to focus on its core business priorities.

We assess your business priorities and environment to identify the ideal combination of technical expertise and technology tailored to your unique needs. Recommending, customizing, and implementing IT solutions are at the core of our strengths. Over the years, our commitment to service and our reputation for technological and business integrity have earned us an extensive list of satisfied clients. We take our responsibility very seriously. It's an approach that works well in everyday situations — and it's precisely what drives our success.
